Dash - ft_yes

yes, please

Summary: *YES, we gonna make **yes***

Version: 1

Contents

Chapter I

Foreword

Looks simple right?

```c
#include <stdio.h>

int main()
{
        for(;;)
                printf("y\n");
}
```

> ℹ Harder, Better, Faster, Stronger

Chapter II

Objective

Create the fastest ***/usr/bin/yes***.

> https://en.wikipedia.org/wiki/Yes_(Unix)

Chapter III

Instructions

- Your program should never leak or unexpectedly quit(Segfault for example).

- If your program doesn't compile, it's a 0.

- Evaluation will be done on 42 Seoul's Mac.

- This dash is a solo project.

- Turn in your code inside the turn-in repository.

Chapter IV

Exercice 00 : ft__yes

	Exercise : 00
	ft__yes

Turn-in directory : *ex*00/
Files to turn in : `ft_yes.c`
Forbidden functions : `vmsplice, splice`

- All other standard libraries and functions are allowed.

- You don't have to get arguments.

- OS specific functions are forbidden. (e.g. splice())

- Program should be at least faster than example code above. Otherwise it's a 0.

- Any assembly code is forbidden.

```
$ ./build.sh
$ ./ft_yes | ./pv >/dev/null
```
